Fisherman; various spots below & above rapids; line & hook causing facial injuries		S = 2 L = 2 = 4 Low Identify & inform participants & instructors.	Dynamic risk assessment. Correct supervision and group control by instructor, safety brief.	
Bridge Stanchions'	Club Members	S = 4 L = 3 = 12 Med Avoid paddling in front of bridge Stanchions, as this may lead to a capsize.	Correct supervision and group control by instructor, safety brief. Dynamic risk assessment.	

Handout (1) CALCULATION OF RISK SEVERITY

In assessing a RISK you need to take into account two factors:

- (1) How serious could an injury be?
- (2) How likely is it to occur?

The following would be a rough guideline:

High Risk: A very serious injury that had a high probability of occurring.

Med. Risk:

- Either (a) A serious injury unlikely to occur
(b) A lesser injury likely to occur

Low Risk:

Would be a slight injury that was unlikely to occur.

- If you take (1) above as a scale of 1 to 5 (5 = high) Seriousness
(2) above as a scale of 1 to 5 (5 = high) Likelihood

Then, multiply them together, this would give a scale as follows:

Translating into: LOW (1-8) MED. (9-17) HIGH RISKS (18-25)

SERIOUSNESS OF INJURY

- 5 = Very high potential for multiple death and/or wide spread destruction.
- 4 = High causing death or serious injury to an individual, i.e. reportable accident under the RIDDOR regulations.
- 3 = Moderate causing injury or disease capable of keeping an individual off work for three days or more, may require reporting under RIDDOR regulations.
- 2 = Slight causing minor injuries, i.e. person able to continue work after first aid.
- 1 = No risk of injury or disease.

LIKELIHOOD OF THE EVENT OCCURRING

- 5 = Very likely, almost certain.
- 4 = Likely to occur, i.e. easily precipitated with slight carelessness for external event, e.g. vibration.
- 3 = Quite possible, the accident is only likely to occur with help, i.e. if somebody slips, failure to replace a light, etc.
- 2 = Possibly - probably is low or minimal.
- 1 = Not likely at all, there is really no risk and accidents will only occur under freak conditions.
